Summary

Software Developer building full-stack, event-driven microservices with **Java, Spring Boot, React/TypeScript and Kafka**: well-tested **REST/GraphQL APIs** shipped with **Docker, AWS and GitHub Actions CI/CD**, built faster with **agentic AI tools (Claude Code)**.

Experience

Software Development Engineer | Wesco International, Canada — Sept 2025 – Present

- Build full-stack features and **REST/GraphQL APIs** in **Java, Spring Boot and React** for a multi-module CRM and order-management platform on a **microservices** architecture.
- Containerized services and test environments with **Docker** and deployed workloads to **AWS Fargate**, standardizing environment setup across the team.
- Built **Kafka**-based, event-driven test harnesses that validate data consistency and asynchronous order-status flows between microservices.
- Integrated automated suites into **GitHub Actions CI/CD**, parallelized test execution to cut runtime by **50%**, and used **agentic AI tools (Claude)** to speed up debugging of flaky tests and root-cause analysis, reducing investigation time by **~30%** and cutting manual release effort.
- Mentored a new engineer on microservice setup and code review, shortening onboarding.

Software Engineer Intern | Cardify, Edmonton — Jan 2025 – Aug 2025

- Built a microservices platform for creating and sharing secure digital business cards (**Java, Spring Boot, React, MySQL**) that supported **1,000+ users** in pilot testing.
- Designed **REST/GraphQL APIs** and an email notification service; integrated **Stripe** subscriptions and **Add to Google Wallet**, resolving billing-sync issues.
- Automated UI and end-to-end tests with **Playwright and Selenium** across the web app, raising regression coverage by **40%**.
- Containerized services with **Docker** on **AWS EC2** and built **GitHub Actions** pipelines running **JUnit/Mockito** unit tests and **Rest Assured** API tests, reducing manual release effort by **35%**.

Projects

OrderFlow QOS: Quote-to-Order Platform | *Java 21, Spring Boot, GraphQL, PostgreSQL, React, TypeScript* — 2026

- Directed a team of **12 role-based AI agents (Claude Code)** (product owner, architect, researcher, developers, QA) to plan, build and test a CPQ-style quote-to-order platform; completed a **30-point sprint in one day** with every change code-reviewed and tested.
- Designed **REST command and GraphQL query APIs** with keyset pagination, batched loading (no N+1 queries) and indexed search, sized for a target of **5M quotes**.
- Implemented tier-based pricing with exact decimal money math, a quote state machine, and **idempotent** quote-to-order conversion protected by database constraints and optimistic locking.
- Built a **React/TypeScript** UI (dashboard, quotes, orders, line-item editor) backed by **115+ automated tests** (JUnit, Testcontainers) in CI; tracked 114 backlog items as GitHub issues with a scripted sync.

TennisLinked | *React Native, Django, PostgreSQL, Docker, AWS*

- Built a cross-platform mobile app on a Django/PostgreSQL microservice backend, with real-time schedule notifications and WebSocket chat; Dockerized and deployed on **AWS EC2** with CI/CD.

Technical Skills

Languages: Java, TypeScript, JavaScript, Python, SQL · **Data:** PostgreSQL, MySQL, Redis, Apache Kafka
Backend: Spring Boot, REST, GraphQL, Microservices, Event-Driven Architecture, JPA/Hibernate
Frontend: React, React Native, TypeScript · **Cloud & DevOps:** AWS (Fargate, S3, Lambda), Docker, GitHub Actions, Maven
Testing: JUnit, Mockito, Testcontainers, Playwright, Selenium, Rest Assured, Postman
AI & Practices: Agentic AI development (Claude Code, multi-agent workflows), Agile/Scrum, System Design, Code Review, TDD

Education

University of Alberta, BSc in Computer Science — Sept 2021 – May 2025
Coursework: Distributed Systems, Software Engineering, Algorithms, Operating Systems, Web Architecture.
