Summary

Software Developer in Test building **test automation frameworks** and **CI-integrated** UI/API suites for microservices (**Java, Playwright, Selenium, Serenity BDD, Rest Assured**), with full-stack Spring Boot/React experience. Uses **agentic AI tools (Claude Code)** to generate and debug tests faster, and verifies AI output before it ships.

Technical Skills

Test Automation: Playwright, Selenium, Serenity BDD, Rest Assured, Postman, JUnit, Mockito, Testcontainers
Quality Practices: Test framework design, API testing, TDD/BDD, parallel execution, flaky-test triage, root-cause analysis, JMeter load testing, SonarQube
CI/CD & DevOps: GitHub Actions, Docker, AWS (EC2, S3), Maven, Git
Languages: Java, TypeScript, JavaScript, Python, SQL · **Development:** Spring Boot, REST/GraphQL, React, Kafka, PostgreSQL
AI & Process: Agentic AI (Claude Code, multi-agent workflows) for test generation and debugging, Agile/Scrum, code review

Experience

Developer – Software Tester | Wesco International, Canada Sept 2025 – Present

- Built end-to-end **test automation infrastructure** with **Playwright, Serenity BDD, Selenium, Java and Maven** for scalable testing across application workflows.
- Implemented **parallel execution** for sanity suites, cutting total execution time by **50%** and speeding up release validation.
- Automated UI and **API** scenarios with **Serenity BDD, Selenium, Playwright and Postman**, increasing coverage across frontend and backend services.
- Built **Kafka**-based test harnesses that validate data consistency and asynchronous order-status flows between microservices.
- Integrated suites into **GitHub Actions CI/CD** for scheduled, reliable regression runs, and used **agentic AI tools (Claude)** to speed up root-cause analysis of flaky tests and failures, reducing false failures.
- Mentored a new QA/SDET engineer on framework setup, test execution and defect debugging.

Software Engineer Intern | Cardify, Edmonton Jan 2025 – Apr 2025

- Led automated testing with **Selenium and Rest Assured**, raising regression coverage by **40%** and catching critical defects **2 weeks earlier** in the release cycle.
- Developed **Spring Boot** REST APIs and wrote **50+ JUnit** unit and integration tests, reducing production bugs by **30%**.
- Integrated test suites into **GitHub Actions** pipelines, cutting deployment time by **30%**; validated tokens for the secure **Add to Google Wallet** feature.

Projects

OrderFlow QOS: Quote-to-Order Platform | *JUnit, Testcontainers, GitHub Actions* 2026

- Directed a team of **12 role-based AI agents (Claude Code)**, including a dedicated QA agent; defined the test strategy (unit → Testcontainers integration → component → E2E) and ran AI-assisted test cycles that caught defects before merge.
- Wrote **115+ automated tests**: JUnit/AssertJ unit tests, **Testcontainers PostgreSQL** integration tests, GraphQL tests, and frontend component tests with mocked APIs, all gated in **GitHub Actions**.
- Turned business rules into **table-driven tests** (pricing, rounding, quote state machine) and covered edge cases: keyset-pagination ties, wildcard escaping, time-zone month boundaries and duplicate-conversion guards.

Tartan SmartHome System | *Java, Gradle, JUnit, SonarQube, JMeter*

- Led a **TDD** QA strategy for IoT REST services with unit, integration and system tests; enforced **SonarQube** quality gates and ran **JMeter** load tests to validate scalability.

Education

University of Alberta, BSc in Computer Science Sept 2021 – May 2025
Coursework: Software Engineering, Algorithms, Distributed Systems, Operating Systems, Web Architecture, AI.
